EDUCATION

Vellore Institute of Technology

B.Tech. Computer Science and Engineering (Specialization in E-Commerce Technology)

Sep 2023 – Ongoing

- Cumulative GPA: **9.45 / 10.0**

Asha Modern School

Class XII (CBSE Board)

Saharanpur, Uttar Pradesh, India

Mar 2022 – Mar 2023

- Percentage: **95.8%**

Asha Modern School

Class X (CBSE Board)

Saharanpur, Uttar Pradesh, India

Mar 2020 – Mar 2021

- Percentage: **98.2%**

PROJECTS

Resilient Customer Churn Prediction Platform [Link]

Jan 2026 – Jun 2026

Technologies: React, Flask, MongoDB, SHAP, AWS S3

- Engineered a decoupled, explainable machine learning platform predicting customer churn probability with 80.81% accuracy based on 30+ demographic, service and billing indicators.
- Integrated a local interpretability pipeline using SHAP LinearExplainer, converting complex model weights into user-friendly visualization contribution charts.
- Built a high-throughput batch prediction pipeline processing CSV files up to 10,000 records, optimizing MongoDB queries to reduce write latency by 15%.
- Leveraged AWS S3 to manage user profile images, incorporating file-type validation, size limits (5MB) and an automated garbage collection routine to delete old images and prevent orphan cloud storage.

Scalable E-Commerce Notification Microservice

July 2026

Technologies: Python, MongoDB Atlas, SMTP/TLS, Dotenv, Git

- Designed and built a notification microservice implementing the Strategy & Factory Design Patterns to decouple business logic from delivery channels.
- Engineered database-level Idempotency checks on MongoDB documents to prevent duplicate notification dispatches, eliminating user spam and lowering API billing costs.
- Implemented a robust Fault Tolerance Engine featuring Exponential Backoff Retries to handle transient SMTP/network issues, alongside a Dead Letter Queue (DLQ) collection to safely store and audit permanently failed notifications.

TECHNICAL SKILLS

- **Programming Languages:** C++, Python, JavaScript
- **Frameworks & Libraries:** Frontend: React.js, Seaborn, Tailwind CSS | Backend: Node.js, Express.js, Flask
- **Machine Learning:** Numpy, Pandas, Scikit-learn, Matplotlib, EDA
- **Cloud:** AWS EC2, AWS S3
- **Developer Tools:** Git, GitHub, Docker, Postman

CERTIFICATIONS

- NPTEL SWAYAM Deep Learning (IIT Ropar, Top 5%)
- SC-900: Microsoft Security, Compliance, and Identity Fundamentals
- NPTEL SWAYAM Marketing Management - II (Top 1%)
- Coursera Industrial IoT Markets & Security

ACHIEVEMENTS

- **Coding Profile:** Ranked 4,495 out of 40,113 participants in LeetCode Weekly Contest 510
- **Academic Excellence:** Secured 100/100 in Mathematics for 3 consecutive years in classes X, XI & XII CBSE Board.

EXPERIENCE

amasQIS.ai

Remote

AI Intern

July 2025 – Dec 2025

- Implemented and fine-tuned supervised (Linear Regression, Logistic Regression, Random Forest, XGBoost) and unsupervised (K-Means) ML models in Python, improving classification accuracy by 12% across high-dimensional datasets.
- Engineered robust ETL and data preprocessing pipelines using Pandas, NumPy and Scikit-learn, reducing training data preparation time by 20%.
